Australian Social Cohesion Survey 2011

Overview

Type	Australian Social Cohesion Survey
Identification	au.edu.anu.ada.ddi.20003
Version	Production Date: 2013-01-02 Version 1.0

Abstract
The Social Cohesion Survey forms part of the Scanlon Foundation Social Cohesion Research Program (SCRP) which commenced in 2007 under the direction of the Monash Institute for the Study of Global Movements (MISGM) and the Australian Multicultural Foundation (AMF). A key element of the SCRP was the conduct of a landmark Australian Social Cohesion Survey in 2007, 2009, 2010 and now 2011.

The aims of this survey are:
- To look at the Australian community's attitudes towards social cohesion, and
- To assess changes in these attitudes over time.

The 2011 survey used a randomly sampled 2,000 respondents with the sample stratified geographically. A minimum of 200 interviews was undertaken in each Australian state / territory (i.e. 1,600 interviews) with the remaining 400 interviews allocated across those states under-represented by the initial sample allocation (i.e. NSW, Victoria and Queensland) in proportion to the population in those states.

Kind of Data	Survey data
Unit of Analysis	Individual

Scope & Coverage

Keywords	Communities, Discrimination, Foreign students, Immigration, National characteristics, Political activism, Political science, Racial discrimination, Refugees, Religion, Voluntary workers
Topics	Australian Studies, Sociology, Culture, Migrants, immigration and multiculturalism
Time Period(s)	2011
Countries	Australia

Geographic Coverage
National

Universe
Persons aged 18 years and over who were residents of private households in Australia

Producers & Sponsors

Primary Investigator(s)	Markus, Andrew, Monash University Smith, Bruce, The Scanlon Foundation
Other Producer(s)	Blakemore, David , Social Research Centre
Funding Agency/ies	The Scanlon Foundation
Other Acknowledgment(s)	, Advisor on questionnaire design , Monash University

Sampling

Sampling Procedure
One-stage stratified or systematic random sample

Deviations from Sample Design
Table 7 of the survey technical report (see Related Materials section) compares the achieved sample profile (using unweighted data) with that of the general population (based on 2006 Census data). It can be seen there is a skew towards older people. There is also a skew towards females (although the figures shown are closely aligned with the expected household distribution of males and females) and tertiary educated respondents. These results are consistent with other similar surveys conducted by the Social Research Centre. All of these factors were taken into account in the weighting procedure (refer to Section 6.2 of the survey technical report).

Response Rate
49.1%

Weighting
For the 2011 survey data a “rim weighting” approach was used to adjust for differential survey response rates across age, gender, educational attainment and country of birth and, where necessary, to also adjust for disproportionate aspects of the sample design (i.e. disproportionate geographic distribution). Where possible, proportions were taken from the 2009 ABS Estimated Residential Population statistics rather than 2006 Census data – this applied to the population estimates of age by gender by geographic location.

“Rim weighting” was used to create weights which adjusted the data in-line with Australian Bureau of Statistics counts on these variables. The weights are created using a statistical regression approach which seeks to achieve the “best fit” possible with the population proportions specified by the weighting variables while disturbing the overall data as little as possible.

The algorithm used for this purpose was provided in the Social Research Centre?s Quantum analysis software to develop sample weights which incorporate the variables state, age, gender, country of birth and educational attainment. These weights were applied to all data prior to reporting and have been included in the electronic data files provided as outputs from the survey.
Appendix 1 of the survey technical report (in the Related Materials section) provides the population matrices used for weighting purposes in the 2011 survey.

Data Collection

Data Collection Dates	start 2011-06-15 end 2011-07-18
Time Period(s)	start 2011-06-15 end 2011-07-18
Data Collection Mode	Telephone interview

Data Collection Notes
See survey technical report (in Related Materials section) for details.

Questionnaires
Structured

Data Collector(s)	, Social Research Centre

Supervision
The following actions were used to
- Provision of a 1800 number for participants to call regarding queries
- Offering to send an introductory letter
- Arranging for interviews in (agreed) languages other than English
- Referring sample members to the Monash University number on an “as required” basis; and

- Ensuring appropriately trained interviewers worked on the survey
(See also Section 4.2 of the survey technical report in the "Related Materials" section).

Data Processing & Appraisal

Data Editing
The data were checked by the archive for missing variable and value labels, out of range values and wild codes, logical inconsistencies, and confidentiality.

Accessibility

Distributor(s)	Australian Data Archive
Depositor(s)	Misson, Sebastian

Confidentiality
To request download access for this study, please submit a "Request for Access to Restricted Datasets" from your ADA user account at <http://users.ada.edu.au> (Note: you need to be a registered user and logged in to make an access request). When access has been authorised, ADA will contact you and may also advise you to complete a special undertaking form.

Access Conditions
Restricted access.

Citation Requirements
All manuscripts based in whole or in part on these data
should:

(i) identify the data and original investigators by using
the recommended bibliographic reference to the data file;

(ii) acknowledge the Australian Data Archive
and, where the data are made available through the
Australian Data Archive by another archive,
acknowledge that archive;

(iii) declare that those who carried out the original
analysis and collection of the data bear no responsibility
for the further analysis or interpretation of them.
